One of the great things about the Common Core is that 45 states can now share resources. We at Capture the Core strongly suggest your first stop should be the ISBE website for Common Core Support (see right).

What follows are just a few online tools you might find helpful as you transition to the CCSS.

**The Common Core iPhone and iPad apps.** These free downloads are a great quick and easy reference.

**Socrative** Formative Assessment is a key to student learning. This site provides a free student response system for doing formative assessing. Students also find it very engaging. [http://www.socrative.com/](http://www.socrative.com/)

**Master Connect** This site may be used to find common formative assessments and Common Core grading tools. [http://www.masteryconnect.com/](http://www.masteryconnect.com/)

**K–5 Math Teaching Resources.** This comprehensive site lists free Common Core resources, games and activities for the elementary math classroom. [http://www.k5mathteachingresources.com/](http://www.k5mathteachingresources.com/)

Information to all the state sites is constantly being added and updated, so check back often.

Using Text-Dependent Questions with Literature

The Common Core State Standards (CCSS) call students to answer questions that require them to read and attain a deep understanding of text. These text-dependent questions should be part of each day’s instruction and can be used across the content areas.

When reading literature, students can answer text-dependent questions at a variety of cognitive levels and can follow a certain progression of questioning (Fisher & Frey, 2012). For example, students might be asked to answer some initial questions for general text understanding, followed by some questions about key details. Then, students can answer questions about vocabulary and text structure. Teachers can then guide students to answer questions aimed at the purpose of the text. Students will be challenged to understand the text deeply when they are asked to answer questions requiring them to make inferences about how parts of the text relate to the whole text.

Finally, students can answer questions that require them to state their opinions, make arguments, and make intertextual connections based on text evidence. Text-dependent questions require students to think critically about their reading. Students should also get in the routine of asking text dependent questions of themselves and of their peers as text is discussed throughout the day.

For more information, click here.

Kindergarteners Question

I Know This Because: When asking students questions about the text, play a game of “I know this because”. During this time, focus on students explaining why they know their answers make sense. If the question were “What color was the girls dress?” Students answer “red” and then add “I know this because the picture shows the girl in a red dress.

What’s In the Bag? - Two participants take home a large bag and return the next day with an object from home in the bag. The class then asks questions to determine the contents of the bag.

Random Object Bin: A bin in the classroom can be filled with many different items. Items can be anything such as a golf ball, a small statue, a ring, a thimble, a pen, or a hair clip. After reading a story, students can work in a small group and find objects that help them retell the story. Exact details of the story will not be in the bin, students may need to find objects that represent some details.

Digital Literacy in Kindergarten

The above strategies can be found at www.isble.net along with informational strategies for each standard at each grade level.

Digital Literacy is embedded throughout the Common Core State Standards. Look at the following link for a host of apps on how to incorporate technology in your lessons.

https://chrome.google.com/webstore/category/app/95-academic-resources?hl=en

Education is not the filling of a pail, but the lighting of a fire.

- William Butler Yeats
Focus on Mathematical Practice 3

The third Practice Standard, **Construct viable arguments and critique the reasoning of others**, asks students to make conjectures, communicate their mathematical thoughts and ideas to others, and listen to and respond to the reasoning of others. Children need plenty of opportunities to work together on tasks. When students are given a challenging task and allowed to work on it together, their natural drive to communicate with others will help them develop the academic language they need to succeed with this Standard.

A sample task might be: How many **different** 6" tall towers can be made from 1" cubes, using exactly 1 red cube and 5 blue cubes?

A follow-up question could be: How do you know you got all of the ways?

**How do I encourage MP3?**

Provide problems so students:

- Engage in reasoning and critical thinking.
- Develop mathematical arguments using objects, drawings, diagrams, and actions.
- Show a method of finding a solution and share their ideas with other students.
- Ask classmates, “How did you get that?”
- Show and tell how they figured out a problem.

Illustrative Math - Kindergarten

Here’s an example for K.CC.A.2: **Know number names and the count sequence.**

Students will take turns drawing a number card, stating the number after and placing his/her counter on that number on the game board. The first student with 3 counters in a row on the grid is the winner.

For more information see this task at http://illustrativemathematics.org/illustrations/373

PARCC Model Content Frameworks

Model Content Frameworks [http://parccmodelcontentframeworks](http://parccmodelcontentframeworks) are offered by PARCC to help inform curriculum, instruction and assessment. The Frameworks can assist in evaluating resources and provide awareness of the necessary balance of tasks as defined in the standards.

Elements for each 3rd-8th grade level course are noted in the diagram.

**Considerations:**

- Use the major, supporting, and additional clusters to inform instructional decisions on time and resources.
- Use the supporting clusters and the practice standards to highlight the focus on the major work.
- Evaluate instructional materials based on the major, supporting and additional clusters, but do not use the MCF to do crosswalks. A curricular analysis needs to consider more than topic-matching by thinking of the spirit of the CCSSM.
Meeting Student Needs: A Layered Approach

By now, you are undoubtedly discovering your students’ unique personalities and talents. That is a joy of teaching! Yet you are likely also learning students’ unique challenges, and for some, personal situations that pose real barriers to learning. This can feel extremely overwhelming.

As a teacher who develops meaningful learning relationships with students, you are in a position to witness not only their academic needs, but also their interrelated physical, social, emotional, and behavioral needs. Yet your role as teacher does not require you to be an expert on the many different scenarios, of varying intensity, that impact your students’ learning.

So, how can you use awareness to help kids? You can begin by adopting an organizational mindset for your thoughts and efforts that is aligned with a comprehensive system of learning supports in your school and district.

Research proves the effectiveness of a layered approach to learning supports that provides best practices that benefit all students, early targeted interventions for some, and more intensive interventions for few depending on need.

A layered approach emphasizes the importance of universal practices to benefit all children. These are within a teacher’s scope and include but are not limited to ensuring safety and security, validating feelings, and offering cultural sensitivity.

School programs that serve children in response to more specific, targeted needs may include mentoring or “check in” programs, for example. The goal is to reduce risk of intensified mental health and behavioral concerns.

A few students, however, may still require more intensive and individualized supports, often best provided through community partnerships.

So, how can you use awareness to help kids? You can begin by adopting an organizational mindset for your thoughts and efforts that is aligned with a comprehensive system of learning supports in your school and district.

Research proves the effectiveness of a layered approach to learning supports that provides best practices that benefit all students, early targeted interventions for some, and more intensive interventions for few depending on need.

This model may sound and look familiar, as it incorporates learning supports by expanding upon the same tiered, public health model that provides the organizing structure for academic and behavioral data-based Response to Intervention.

Classroom Connections
