The 5 Formative Assessment Strategies to Improve Student Learning

In Dylan Wiliam’s new book, *Embedded Formative Assessment*, he provides the 5 strategies that he has come to believe are core to successful formative assessment practice in the classroom:

1. Clarifying, sharing, and understanding learning intentions and criteria for success – getting the students to really understand what their classroom experience will be and how their success will be measured.

2. Engineering effective classroom discussions, activities, and learning tasks that elicit evidence of learning – developing effective classroom instructional strategies that allow for the measurement of success.

3. Providing feedback that moves learning forward – working with students to provide them the information they need to better understand problems and solutions.

4. Activating learners as instructional resources for one another – getting students involved with each other in discussions and working groups can help improve student learning.

5. Activating learners as owners of their own learning – getting students to become owners of their own learning can not only help students take responsibility for their own learning, but can lead directly to improved student performance.

A free webinar by Dylan Wiliam emphasizing the clear understanding of formative assessment and giving some practical strategies is available at: [http://info.nwea.org/FY2012WinterCampaignKLTWebinar2On-demandRegistration.html](http://info.nwea.org/FY2012WinterCampaignKLTWebinar2On-demandRegistration.html)

When the cook tastes the soup, that’s formative;
when the guests taste the soup, that’s summative.

- R. Stake

Academic Vocabulary and the Common Core State Standards

The Common Core Standards for English Language Arts emphasize the teaching of academic vocabulary (Tier 2 Words). As defined by Isabel Beck in *Bringing Words to Life*, academic vocabulary includes:

- Words likely to appear frequently in a wide variety of texts/disciplines (utility and importance)
- Words necessary for understanding a text and which allow for rich representation (instructional potential)
- Words that relate to other words and offer students more precise ways of referring to ideas about which they already know (conceptual understanding)

Consider the following questions when determining which Tier 2 Words to choose for instruction:

- How generally useful is the word? Is it a word that students are likely to see often in other texts? Will it be of use to students in their own writing?
- How does the word relate to other words or ideas that the students know or have been learning?
- What does the word choice bring to the text? What role does the word play in communicating the meaning of the context in which it is used?

Tier Two Vocabulary Strategies

**Listen Carefully**

While reading a story aloud, listen for the most powerful words and list them on a chart of the alphabet according to the first letter of each word.

**Favorite Word Cards**

While reading a story aloud, encourage students to identify unusual words. Afterwards, write each student’s favorite word from the story on an index card. As students share words with each other or with family members, they should be asked to use the word in a sentence.

**Word Twins**

Word Twins refer to two different words with the same meaning such as happy and joyful. List commonly used words on a chart and make a scrambled list of the twins of those words. Work with students to help them identify “word twins” and draw a line to connect each word with its twin.

Coming Soon...

New ISBE Winter/Spring Series: ELA Common Core Shift Training Sponsored by the Illinois State Board of Education

ELA Content Area Specialists will be hosting another professional development opportunity with several one day stops around the state. The cost will be minimal and registration is now open.

Content will be geared towards the CCSS shifts and updates that PARCC has made regarding assessments. Breakout sessions will be offered along with lunch.

Dates and Locations

Mar 21st: Rockford
Mar 22nd: Moline
Apr 9th: Gurnee
May 1st: Peoria
May 2nd: Urbana
May 3rd: Chicago/Midway

Registration details can be found at the following link: [http://conferences.illinoisstate.edu/ela/](http://conferences.illinoisstate.edu/ela/)
Focus on Mathematical Practice 6

The sixth Math Practice Standard, **Attend to Precision**, means mathematically proficient students use clear definitions in discussions with others and in their own reasoning. Students state the meaning of symbols they choose, including using the equal sign consistently and appropriately. They carefully specify units of measure, and label axes to clarify the correspondence with quantities in a problem. They calculate accurately and efficiently, express numerical answers with a degree of precision appropriate for the problem context.

This practice standard is much more about precision in language and communication than it is about accurate calculations. Students should be sharing ideas using grade appropriate concise language and descriptions. Tasks may require students to present solutions using valid chains of reasoning and appropriate symbols, especially the equal sign.

Fluency Expectations in Kindergarten

**K.OA. 5 Fluently add & subtract within 5.**
Kindergarten students are fluent when they are able to demonstrate accuracy. Students are fluent when they display accuracy (correct answer), efficiency (a reasonable amount of steps in about 3-5 seconds without resorting to counting), and flexibility. Students develop fluency by understanding & internalizing the relationships that exist between & among numbers. Often, when children think of each fact as an individual item unrelated to any other fact, they attempt to memorize separate bits of information that can be easily forgotten.

Instead, in order to fluently add and subtract, children must first be able to see sub-parts within a number (K.CC.4.c).

PARCC Updates

PARCC (Partnership for Assessment of Readiness for College and Careers) is actively working on producing computer-innovative assessments for 21 states and the District of Columbia. If you have not already had an opportunity to explore their website, check it out at parconline.org. The many resources available include the Model Content Frameworks, Item Prototypes, Performance Level Descriptors, Assessment Reference Sheet, Calculator Policy and Technology Guidelines.

PARCC's assessments and the PARCC Model Content Frameworks begin in Grade 3. However, Student Achievement Partners [achievethecore.org](http://achievethecore.org/) worked closely in the creation of these materials and has published a document including K-2 that describes key fluencies and cluster emphasis. See page 4 of the document where it discusses the major, supporting and additional clusters in Kindergarten.

“Education is not the filling of a pail, but the lighting of a fire.”

William Butler Yeats
Every Moment is Instructional

A wise teacher once said that “every moment with a child should be an instructional moment.” The adage is simple, yet true. In the classroom, a teacher’s behavior is observed, interpreted and even repeated by students. The importance of a positive example is intuitive, and also proven by research. Studies show that, when teachers act negatively toward students, misbehavior, delinquency, disengagement, and academic failure increases (U.S. Department of Education, 1998).

Further research indicates that positive modeling and explicit instruction are the best ways to decrease student misbehavior (Jonassen, 1999), thus increasing learning and (re)-engagement of students. Effective modeling includes exhibiting competencies in social, emotional, behavioral, physical and cognitive learning development while explicit instruction can focus on teaching students healthy coping strategies, behaviors, and academic skills. Teacher-student relationship building also supports an emotionally safe classroom environment. These supportive interactions and modeling directly impact learning.

Some questions teachers may consider when modeling appropriate behaviors:

- Is my tone quiet and calm when I interact with students?
- Do I use appropriate and understandable language?
- Do I model classroom rules?
- What are the strengths of each student in my class?
- Do I react with a respectful tone of voice?
- Does my body language reflect non-confrontation?

Response Systems

As part of the instructional planning process, teachers should consider how students will know when they have acted appropriately or inappropriately. Studies show that acknowledgement by teachers is “related to both initial and long-term academic engagement and social success” (Akin-Little et al, 2004). Methods of acknowledgement/correction need not be elaborate. In fact, social recognition tends to be most effective in reinforcing intrinsic motivation. When using a tangible reward system initially to increase buy-in for some students, teachers should:

- Deliver them quickly after the desired behavior is exhibited;
- Connect them to the behavior, not the individual;
- Vary the type (praise, incentives, approval, recognition, points), number, and frequency;
- Consider the appropriateness of the reward; and
- Gradually reduce to eventually eliminate

Research has shown that younger students positively respond initially to tangible rewards (such as stickers) while older students respond best to social/verbal acknowledgements. Ultimately, planning for effective acknowledgments within the school-wide and classroom systems can increase and maintain positive behaviors.
