Illinois is transitioning to Common Core State Standards (CCSS for reading and mathematics) - moving from the final administration of the Illinois Standards Achievement Test (ISAT) in 2013-2014 to the Partnership for Assessment of Readiness for College and Career (PARCC) Assessments in 2014-2015. What follows is information to assist educators so they can better maintain focus on the key areas in preparation for the full implementation of the Common Core State Standards and PARCC Assessments in 2014-2015.

The following outlines what reading and mathematics CCSS will be assessed on the ISAT in 2014. All items on the reading and mathematics assessments were written to the CCSS. The test maps are intended to assist educators as they consider learning progressions, instructional shifts, and rigor of the CCSS.

Please note that the science assessments are aligned to the Illinois Science Assessment Frameworks.

Reading - Grades 3-8
The operational reading assessments are comprised of 51 items – 50 multiple-choice items and 1 extended-response item.
CCSS Domain - Key Ideas & Details 50%-65% 25-32 items
CCSS Domain - Craft & Structure 15%-25% 8-13 items
CCSS Domain - Integration of Knowledge & Ideas 10%-20% 5-10 items

Mathematics – Grades 3-8
The operational mathematics assessments are comprised of 68 items – 65 multiple-choice items, 2 short-constructed-response items, and 1 extended-response item.

Click here for grade specific breakdowns

Science
The operational science assessments are comprised of 75 multiple-choice items.

Information taken from the ISBE website

2014 Illinois State Assessment (ISAT)
March 3 – 14, 2014
Shift Kits Designed for Illinois Educators

In order to be truly aligned with the Common Core State Standards, there are instructional shifts in English Language Arts and Literacy which are required of teachers.

The ELA Content Specialists, in partnership with ISBE, created Shift Kits to provide schools and districts resources aligned with each shift of instruction.

There is a total of nine Instructional Kits and one Administrator Kit.

Each kit contains:
- A guide
- Recommendations from the International Reading Association
- PowerPoint(s) including facilitator's guides and handouts
- A list of recommended journal articles and books

Each kit also includes a table of contents where additional tools such as videos, webinars, and websites, for that shift are provided.

Educators are encouraged to visit the site and sign up for the listserv to receive notifications of updates on the Shift Kits as well as additional ELA Resources.

Educators can access the Shift Kit website at http://education.illinoisstate.edu/ela/

Close Reading - What Does It Really Mean?

The Close Reading Shift Kit has a plethora of resources for teachers as they look at ways to enhance students’ abilities to closely read text.

A FEW of them are:
- Article from the International Reading Association providing a six step process for guiding students to closely read text.
- Three power point presentations accompanied by notes and handouts.
- Videos, webinars and websites about Close Reading.
- Journal Articles
- Three part series of articles entitled “The Art of Close Reading.”

The Aspen Institute

“Close Reading of text is not only, or even primarily, an English language arts strategy. It can be an effective strategy for deepening content knowledge and learning to read like an expert in all academic disciplines.”

Writing from Sources

The CCSS Writing Standards strongly emphasize the need for students to learn to write about the information that they find in text. This coincides with recent research suggesting that writing about texts and engaging in the act of writing text increase reading comprehension.

The Writing from Sources Shift Kit contains resources for teachers in the area of writing.

Some of these resources include:
- Power point presentations with notes and handouts
- Writing Task Template Cards from the Literacy Design Collaborative
- Links to websites with rubric and lesson ideas
- A number of handouts providing additional teacher tools
Effectively Incorporate Technology in the Classroom

Today’s students will continue to grow up in a rapidly evolving digital age. With this in mind, we need to expose our students to quality technology in a meaningful way to prepare them for the future.

The new Illinois Learning Standards incorporating the Common Core specifically say students should be using technology to learn. Mathematical Practice Standard 5, **Use appropriate tools strategically**, says “When making mathematical models, (students) know that technology can enable them to visualize the results of varying assumptions, explore consequences, and compare predictions with data. ”

7.G.2 Draw (freehand, with ruler and protractor, and with technology) geometric shapes with given conditions. Focus on constructing triangles from three measures of angles or side, noticing when the conditions determine a unique triangle, more than one triangle, or no triangle.

The National Library of Virtual Manipulatives is free and has activities separated by grade level and Domains [http://nlvm.usu.edu](http://nlvm.usu.edu).

GeoGebra is free dynamic software that allows students and teachers to create and manipulate shapes and equations. It also has a large selection of free materials/videos already created for every grade level. [http://www.geogebra.org](http://www.geogebra.org).

A free online graphing calculator that allows students to investigate graphs and equations can be found at [https://www.desmos.com/](https://www.desmos.com/).

Professional Development Opportunities

**Save the Dates**
ISBE and the Illinois Association of Regional Superintendents of Schools are hosting two **Summer Conferences** at the Springfield Convention Center on June 17th and 18th and at Pheasant Run in St. Charles, IL on June 11th and 12th. Save the dates to join teachers and other educators who are making the new standards come alive in their classrooms and schools!

If you missed the **Illinois Institute for Mathematics Leaders** last year, have no fear, another institute is being hosted by ISBE. Save the date for June 16th and 17th in Springfield. There will be two concurrent institutes: K-5 and 6-12. More information and registration is coming soon.

“Go down deep enough into anything and you will find mathematics.”
Dean Schlicter

7th Grade Geometry

The teaching channel is a resource that has many videos available providing examples of teachers teaching students lessons that are built upon the Common Core State Standards for Mathematics. In this example, the teacher gives examples of students discussing connections between 2-D and 3-D views of figures. 7.G.3 – Describe the two-dimensional figures that result from slicing three-dimensional figures, as in plane sections of right rectangular prisms and right rectangular pyramids. Students are also actively engaged in MP5 (Use mathematical tools strategically) as students use manipulatives, tracing paper, calculators and tools on an interactive board. Dealing with Mid-Year Stress

Keeping Assessment in Perspective

During this time of year, teachers and students often start to feel low energy as well as an urgency in regard to annual assessments. Testing can offer valuable information, but may also cause concern, stress or fear. Teachers can help keep assessment in perspective by:

- **Maintaining a balanced approach to testing**
  Annual testing is just one component of a balanced assessment strategy and should be considered in proportion with other assessment feedback.

- **Focusing on assessment’s purpose**
  Gaining a cumulative measure of student learning that highlights learning strengths and achievement gaps can help identify appropriate interventions and effective teaching strategies.

- **Sharing the “why” with students**
  Share with students the purpose and benefits of assessment. Relieve student stress by letting them know how the information gathered will be used to promote their learning.

- **Building skills, not pressure**
  Maintain focus on instruction based on learning standards and student growth, instead of just grades.

Chronic Stress

Too much stress can become counterproductive and prolonged stress can be disruptive to student learning. Studies have shown that exposure to this kind of chronic stress can produce negative academic (Duplechain, 2008) as well as mental, physical, and social impacts.

Children may experience multiple triggers of chronic stress both inside and outside of school, including divorcing parents, health issues, or bullying (Felitti, 1998).

If a student exhibits re-occurring signs of chronic stress, a teacher may ask, in private, if anything is upsetting him/her and request assistance from school support personnel. As a mandated reporter, a teacher who becomes aware of signs of abuse MUST report them (325 ILCS 5/4).

Dealing with stress is an important life skill that teachers can model powerfully. Learning how to deal with stress can help students and teachers persevere through challenges to ultimately improve student learning.

Teacher Self-Care

Teachers are also subject to stress, including secondary trauma as they “take on” the stress of their students. Fortunately, teachers can model resiliency, emotional self-monitoring, and strategies that benefit both teachers and students (Wolpow, 2011).

Click here for a student-friendly video about reducing stress. (Visit link at bottom of page for online newsletter.)

Ways to Reduce Stress at School:

1) **Create emotionally safe conditions for learning.**
   *E.g. recognize/discuss worries*

2) **Model and practice stress reduction behaviors.**
   *E.g. peer-support, breathing exercises, physical activity, art*

3) **Adapt physical environments.**
   *E.g. music, lighting, nature indoors, less stimulating walls*

Making Connections

**Social/Emotional Learning Goal 1:**

“Develop self-awareness and self-management skills to achieve school and life success.”

**Danielson Framework:**

1b. Demonstrating knowledge of students
2b. Establishing a culture for learning
3a. Communicating with students
4e. Growing and developing professionally

**Conditions for Learning Indicators (Rising Star): CL 10 and CL 11**

“The school culture promotes and supports the academic, physical, social, emotional, and behavioral skill development and engagement of students. (AND) ... the physical, social, emotional and behavioral health of all school personnel.”

Signs and Strategies

If chronically stressed, students may:

- Have difficulty paying attention
- Be quiet, upset or withdrawn
- Show changes in performance
- Complain about being tired
- Increase aggressive behavior

(Office of Juvenile Justice and Delinquency Prevention (OJJDP))

Related Conditions for Learning Indicators are included in the Rising Star on IIRC school improvement tool and accessible at ISBE’s Learning Supports web site.
