GUIDELINES FOR DETERMINING NEED FOR DIAGNOSTIC TESTING

• Use screening, prior outcome assessment, and progress monitoring assessment to target essential components for intervention.

• Implement research-based intervention targeting the essential components.

• Evaluate the adequacy of the intervention using progress monitoring assessment.

If adequate progress → maintain
If lack of adequate progress → increase intensity

• Examine and increase integrity of implementation.

• Examine and increase intervention time.

• Examine and decrease group size.

If adequate progress → maintain
Only if not making → administer additional adequate progress targeted diagnostic tests
