Goals of Presentation

1. Review essentials of safety training
   • Goals and content
   • Training methods
   • Maintenance concerns

2. The Role of ABA in Safety Management
   • Traditional Role of Behavior Analysts
   • Potential Contributions

3. Recommendations
Goals of the Report

- Overview of seclusion & restraint laws in schools
- Determine whether allegations of abuse are widespread
- Examine facts & circumstances of cases involving either abuse or death

Methodology

- Reviewed federal & state laws and abuse allegations from groups, parents, media over last 2 decades
- Examined documents related to closed cases including police & autopsy reports, and school policies
- Interviewed parents, attorneys, school officials
GAO Selected Findings

1. No *federal* laws restricting [regulating] use of seclusion & restraints in public and private schools
2. Existing state laws are widely divergent
3. “Hundreds of cases of alleged abuse and death ... with these methods.”
4. No single source (web site, agency, etc.) that collects information on use of these methods
Examples of ‘Divergent’ Practices

- From 1-2 paragraphs to 15-20 pages of regulations
- “Impedes learning by other students” to “To prevent severe injury to self or others”
- “Training in de-escalation’, to officially approved multi-day programs with required content
- No reporting requirement, to reporting of any use of ‘limiting’ procedure.
- No ‘authorization’ mechanism, to specific procedures and individuals must authorize.
Commonalities of Abuse & Fatalities

1. Involved restraint and/or seclusion where no physical aggression occurred
2. “Restraints that block air to the lungs can be deadly”
3. Teachers & staff not trained in the use of seclusions and restraints
4. Involved restraint and/or seclusion in the absence of parental consent
General Consensus re: Policy

- Only if serious & imminent risk of self-injury or harm to others
- Only as last resort, after less restrictive techniques have failed
- Only as long as the serious & imminent risk is present
- Never for threat, punishment, compliance, control, convenience, low-staffing ratios
- Only by individuals trained & competent and trained in prevention
- Immediate de-briefing and analysis by participants
‘Safe’ Assumptions About Restraint

1. Restraint is always risky
2. Restraint, in and of itself, doesn’t directly teach [desirable] skills, alternative behaviors
3. The more effective the restraint, probably a higher abuse potential
4. Restraint is probably physically, emotionally traumatic
5. If restraint has unpleasant, aversive effects on the student, then a wide array of side-effects are likely
6. Restraint is ‘elicitive’ and/or evocative
Goals of Safety Training Curricula

1. Prevent behavioral crises.
2. Reverse the momentary escalation and intensity of crisis behaviors.
3. Safely and therapeutically manage crises without injury and trauma.
4. Terminate crises as quickly as possible.

5. *Evoke, teach, and strengthen behaviors that are incompatible with crisis behaviors.*
Essentials of a Safety Curriculum

✓ Regulations, Philosophies, Policies
  Federal & state regulations, organizational philosophy regarding use, policies, procedures, practices

1. Incident Prevention
   Environmental, social, staffing, and activity methods to decrease the likelihood of challenging behavior.

2. Incident Minimization
   Strategies for early anticipation and detection of challenging behavior and methods to stop, minimize, and reverse the progression of challenging behavior.

3. Incident Management
   Strategies and techniques for the safe, therapeutic management, termination, and future prevention of challenging behavior.

✓ Reporting and Analysis
  Immediate recording of event and surrounding variables, reporting of outcome, injuries, recommendations
Essentials of *Incident Prevention*

1. Significant focus upon environmental features and safety
2. Basic staff safety ‘habits’ such as interaction skills, clothing, proximity, materials, etc.
3. Verbal and non-verbal (i.e., ‘body language’) communication
4. Avoiding power struggles, conflicts, etc.
Essentials of *Incident Minimization*

1. Clarifying classes or categories of behaviors – crisis *vs.* non-crisis
2. Identification and analysis of antecedents – ‘Triggers’ and ‘Signals’
3. Planning and teamwork – identifying a “leader”, etc.
4. De-Escalation model applicable to verbal and non-verbal individuals
Essentials of *Incident Management*

1. Non-invasive protection skills – safety-stance, blocking, etc.
2. Releases for commonly encountered grabbing – e.g., wrist, hair pull, etc.
3. Physical hold procedures specific to target students and target staff
4. When, how to release and recover
Reporting and Analysis

1. Immediate de-briefing and documentation
2. Review sequence of events leading to incident
3. Identification of mistakes, errors and/or possible alternatives
4. Recommendations regarding future actions
Performance at 6 month follow-up

A QBS Presentation
Maintaining Safety Skills

1. Annual re-certification with rigorous correction procedures
2. Regularly scheduled competency assessments e.g., “Technique-of-the-Week”
3. Training review after every use
   ✓ Of utilized techniques
   ✓ Preventive, antecedent strategies
4. Develop Peer Observers-Trainees
   ✓ Peer Trainers (van den Pol, Reid, Fuqua, 1983)
   ✓ Peer Feedback (Alvero & Austin, 2004)
‘Framing’ Restraint Prevention Efforts

- Consider the continued use of physical intervention as a *treatment failure*
- Reducing use of physical restraint requires a proactive management strategy & plan
- Routinely require external review & recommendations of sample or all restraints
- Even rigorous training in prevention and de-escalation does not constitute a restraint prevention program.
Traditional Role of Behavior Analysts

Marginally involved in crisis management.

1. Trainers’ credentials – BCBA vs. ??
2. Safety Techniques for use in BSP
   e.g., ‘Brief contingent restraint’ (Rolider, et al., 1991)
3. Analysis of reinforcing effects (Favell, et al., 1978)
4. ABA not integrated into crisis curricula
5. BSP include ‘Emergency Procedures’, often not treatment or analytic element of intervention
Potential ABA Contributions

1. Understanding of reinforcers supporting ‘crisis’—Why do crisis behaviors occur?
2. Understanding reinforcement supporting the use of crisis interventions, restraint.
3. Additional antecedent analyses
4. Utilizing empirically-based procedures within crisis management framework
5. Evaluation & measurement of efficacy
Positive Reinforcement

If, under certain antecedent stimulus conditions, a response occurs which is followed by a positive, desirable consequence,

...then, the next time the antecedent stimulus conditions are present, the response is more likely:

Antecedent → Behavior → Consequence

“Stand Up Please” → Student stands → “Great.. thanks so much!”

0-2 minutes
Analysis of Crisis Events

- **Crisis**
  - Aggression >> Hold, escort, altered VB
  - Call other staff, gloves
  - Screaming >> Remove other students, objects
  - Attempt de-escalation
  - Pounding >> Firm directive, constant obs.
  - Rocking >> Close proximity, re-direct to work
  - Humming >> Staff busy, don’t notice

A QBS Presentation
A Classic Behavioral Trap

**Student Contingency**

Instruction → Student Stands → “Sit!”

**Teacher Contingency**

Student Stands → “Sit!” → Sits

A QBS Presentation
A “Restraint” Trap

**Student Contingency**

- Instruction → Aggression → Restraint

**Teacher Contingency**

- Aggression → Restraint → Safety

A QBS Presentation
Motivational Analysis of Restraint

For the Recipient (Student)

- Possible negative reinforcement effects
- Possible social reinforcement effects

Task presented > Aggression > Restraint, Task Ended

Aggression >> Restrain >> Risk is suppressed, safety
Sterile environment

Aggression >> Restrain >> Thanks from co-workers

Aggressive student >> Restraint >> Adrenalin, other biochemical

“If I anticipate aggression & restrain student, things will be safer

- Possible sensory reinforcement effects
- Possible faulty & inaccurate RGB/CSS

A QBS Presentation
Evidence-Based Enhancements
(to/within safety procedures)

1. Motivationally-based alternatives
e.g., Functional Communication Training
   (Luiselli, et al, 2000)

2. Reinforcement of incompatible behaviors
e.g., DRI, DRO

3. Generating compliance of high $p$ behaviors
e.g., Behavioral Momentum

4. Reinforcement for ‘progress’ during emergency
call procedures
e.g., Differential Reinforcement of ‘Calm’

A QBS Presentation
De-Escalation Strategies

1. Help Strategy
   • Functional communication
   • Reinforce approximations

2. Prompt Strategy
   • High $p$ behaviors
   • Incompatible behaviors

3. Wait Strategy
   • Safe monitoring positioning
   • Avoid reinforcing student
Comprehensive Behavioral Safety System

1. Create Behavioral Safety Culture – ala SW-PBIS
2. Ensure competency-based behavioral staff training
3. Establish rigorous criteria for & after use to reduce need for safety procedures:
   ✓ Operationally-defined criteria for application (Luiselli, et al., 2000)
   ✓ Mandatory behavioral consultation (Donat, 1998)
   ✓ Allowable # of holds (Singh, et. al., 1999)
4. Behavioral Trend Review
   ✓ Systems-based, not exclusively student-based
   ✓ Measurement and Trending
   ✓ Plans of correction
Creating a Behavioral Safety Culture

- Restraint reduction, elimination, or non-use linked to organizational goals
- Continuous involvement by all levels of the organization
- Processes within organization that support (frequent) the issue through data collection and sharing, trending, etc.
- Job Roles linked to goals – the reduction and/or elimination of ...
Environmental Antecedent to Crisis Behavior

- Loud Noise / Noxious Stimulus
- Delivering Care
- Limit Setting / Redirection
- Space Intrusion
- Ignored by Others
- Transition
- Staff Direction / Instruction to Work
- Peer Behavior / Interactions
- Other Request Denied / Item Taken Away
- Alone
- Unclear / Undetected

Management Technique
Behavior(s) Initiating Physical Management

- Socially Inappropriate (11), 15%
- Disruption (16), 22%
- Physical Aggression to Staff (20), 27%
- Aggression to Property (7), 9%
- Other (Describe Below) (3), 4%
- Non-incident Type (3), 4%
- Physical Aggression to Peer (5), 7%
- Self Injury / Self Harm (4), 5%
- Elopement / Attempt (3), 4%
- Fall (1), 1%
- Suicidality (Statement / Gesture) (1), 1%
Additional Recommendations

1. Review each procedure regarding each student prior to need to use
2. Obtain prior “informed” acknowledgement that emergency procedures may be necessary
3. Non-participating BCBA observer during restraint
4. Functional analyses of each restraint event:
   - Behavioral Observer for descriptive account
   - Confirmation of analysis after event
