

Samples to Success

Sample items provide valuable insight into how students engage with different texts, tasks, and contexts, highlighting the types of opportunities they need for success in the classroom. These items offer a shared reference point for understanding proficiency expectations, complementing the assessment's role in measuring learning. By analyzing items alongside performance data, educators can gain a deeper understanding of students' strengths and areas for growth. Students thrive in environments rich with diverse materials, challenges that vary in task type, and multiple avenues for demonstrating understanding. High-quality instruction, aligned with the learning goals, is the most effective way to support students' growth and prepare them for success.

MATHEMATICS GRADE 4

The items featured in this rubric are a mix of items representative of those found on the IAR and items appropriate for classroom instruction to support and build the skills measured on the IAR. The distinction between a student scoring proficient and above proficient on the IAR is primarily determined by the total points earned on items that require modeling and/or reasoning. Students who can effectively explain and demonstrate their thinking are most likely to earn these points.

Measurement & Data

4.MD1

Expectation at Proficient:

Identify relative sizes of measurement units within one system of units.

Within a single system of measurement, express measurements in a larger unit in terms of a smaller unit.

Record measurement equivalents in a two-column table.

Below Proficient

Three lengths, in feet, are given. Select the equivalent length, in inches, for each measurement.

Lengths

Feet	Inches
2 ft	24 in.
3 ft	
4 ft	
5 ft	

Choices:

- 30 ft
- 36 ft
- 40 ft
- 48 ft
- 50 ft
- 60 ft

Approaching Proficient

Three lengths, in feet, are given. Write the equivalent length, in inches, for each measurement.

Lengths

Feet	Inches
3 ft	
4 ft	
5 ft	

Proficient

Mr. Jots measures the lengths of 3 desktops in his classroom. Some of the lengths are measured in feet and some are measured in inches. The measurements are recorded in the table shown. Complete the table with the correct unit.

Table Lengths

Table	Feet	Inches
Table #1	3 ft	
Table #2	4 ft	
Table #3		60 in.

Above Proficient

Generate a conversion table for feet and inches.

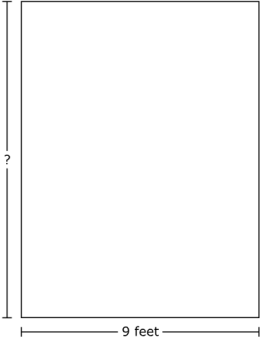

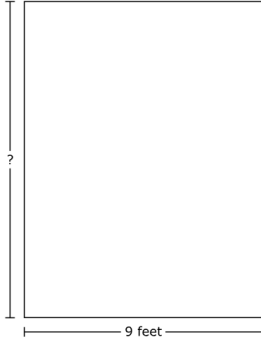

Feet	Inches

Explain how to convert a measurement in feet into a measurement in inches.
