
A LOOK AT KINDERGARTEN READINESS
Statewide KIDS implementation receives support from a variety of public and private partners, including:

KIDS Resources.......................................................................................................................13
Until recently, Illinois did not have a consistent statewide way of determining whether children entering kindergarten possessed the skills and developmental strengths associated with long-term success in school. In the 2017-2018 school year, all kindergarten teachers in Illinois began observing their students on a common set of developmental measures using the Kindergarten Individual Development Survey (KIDS).

Aggregated statewide, KIDS data provide insight into children’s unique learning and support needs and can help teachers and families understand trends in student development over the course of the year. This data provides information for teachers, administrators, families, and policymakers in Illinois to act earlier and more precisely to provide children with the supports and opportunities necessary to achieve success in school and beyond.

**Background and Goals**

With this second annual statewide KIDS report, the hope is that a clearer and earlier picture of student developmental readiness will emerge to:

1. Assist classroom teachers in refining instruction and identifying professional learning needs
2. Allow early childhood providers to align programming around clear expectations for kindergarten readiness
3. Guide families on how to partner with teachers to advance learning at home and obtain additional needed supports
4. Inform state, local, and district policy decisions and specify needs for additional resources and investment
How Does KIDS Work?

KIDS is the result of years of planning and collaboration between the Illinois State Board of Education (ISBE), the early childhood community, advocates, educators, and policymakers. KIDS was developed in alignment with Illinois Early Learning and Developmental Standards (IELDS), Illinois Early Learning Standards–Kindergarten (IELS-K), and other state standards including Common Core State Standards (CCSS) and Next Generation Science Standards (NGSS).

The full KIDS instrument includes 55 measures within 11 learning domains. Each domain contains multiple measures, and each measure consists of a progression of developmental levels typical for kindergarten-aged children. For each measure within the KIDS tool, teachers indicate the highest developmental level they observe each child mastering.

KIDS was piloted for five years before being implemented statewide in 2017. ISBE identified the mandatory 14 State Readiness Measures based on feedback from pilot district participants. KIDS is an observational tool designed to help teachers, administrators, families, and policymakers better understand the developmental readiness of children entering kindergarten.

ISBE requires kindergarten teachers to collect observations within the first 40 days of school on a minimum of 14 required measures. Those “14 State Readiness Measures” constitute a validated sample from four critical learning domains linked to children’s success in the early elementary grades: Approaches to Learning and Self-Regulation, Social and Emotional Development, Language and Literacy, and Math. This subset of 14 measures provides a proxy of readiness at the beginning of kindergarten.

“KIDS data gathered from these observations inform not only our kindergarten but also our pre-K strategies so we can see gains from students as they enter the K-12 continuum.”

— Jeff Craig, Superintendent, West Aurora School District 129

¹For additional information about the timeline and process of developing KIDS, see https://www.isbe.net/Documents/KIDS-IL-School-Readiness-Initiative.pdf
“KIDS’ emphasis on children’s emotional intelligence and competence may be an important catalyst for a statewide move back to a play-based kindergarten curriculum that focuses on the whole child rather than isolated academic skills.”
— Megan Hillegass, Bilingual Preschool for All Teacher, Valley View School District
The 14 State Readiness Measures are organized into four learning domains and collapse into three developmental areas:

<table>

KIDS is an observational protocol. It is neither a pen and paper test, nor does it involve pulling children aside or disrupting instruction. Rather, teachers are trained to collect observational data on students as they go about their daily routines – such as playing, doing schoolwork, having conversations, and following directions. There is no interruption to regular classroom activity. Although there are only 14 required measures to collect, districts interested in a clearer picture of individual student development, skill level, and growth over time are encouraged to collect more than the required 14 measures and/or to administer KIDS multiple times a year.

KIDS is designed to accommodate diverse learning, communication, and language styles, allowing children to demonstrate skills and abilities in a variety of ways, such as use of a communication board, sign language, or their native language. Bilingual kindergarten classrooms in Illinois provide instruction on phonological awareness and letter and word knowledge in different ways from classrooms with predominantly English-only instruction. For this reason, the KIDS LLD measures\(^2\) in the 14 required measures were modified for use in bilingual classrooms.

---

\(^2\) For specific information on how and when teachers would utilize these alternate measures, see the “Guidance for Dual Language Users” document at [https://www.isbe.net/Documents_KIDSWebsiteResources/LLD_Guidance.pdf](https://www.isbe.net/Documents_KIDSWebsiteResources/LLD_Guidance.pdf)
Because early childhood is a time of rapid development in multiple areas – physical, emotional, cognitive, and social growth – determining a child’s readiness for kindergarten involves more than observing a child recite shapes, numbers, and colors. In the case of KIDS, “demonstrating readiness” means that, by the 40th day of school, kindergarten teachers observed their students and collected multiple pieces of evidence of the child displaying skills, knowledge, and behaviors. This evidence indicates the child has reached a developmental level associated with typical expectations for children at kindergarten entry. Children who display these typical or anticipated behaviors and skills in all three developmental areas demonstrate kindergarten readiness. Children who display the skills and behaviors expected upon entering kindergarten in none, one or two of the developmental areas may need additional support. Districts or teachers that want to track student growth across the school year can administer KIDS in the winter and/or the spring. The tool and scoring progress along with children’s advancement to match the skills and learning that are typically displayed later in the year.

Many factors determine a child’s “readiness” for kindergarten. The KIDS 14 required measures provide a proxy of “kindergarten readiness,” as they include a narrow set of specific skills assessed by a small number of selected measures. This subset does not provide comprehensive coverage of the IELDS, IELS-K, or research-based developmental constructs that are represented in all the KIDS domains. For a more comprehensive view of individual student or group-level development, teachers would need to collect observations on all measures in each needed domain, 29 specific measures in the 5 readiness domains, all 55 measures in 11 domains, and/or at multiple points throughout the year. Even so, the 14-measure subset does provide a directional indicator of children’s strengths and developmental areas that need more support.

It is important to note that the development of individual children of the same chronological age varies, and that children enter kindergarten with a wide range of early experiences. A child that is not demonstrating readiness in a particular measure or developmental area at the same time as his or her peers is not necessarily a reason for concern. Developmental skills build upon other developmental skills. Providing appropriate supports allow children the opportunity to get back on track – something easier to do in the earlier years.

---

3 See the full KIDS instrument at https://www.isbe.net/Documents/KIDS-User-Guide-Instrument.pdf
4 See the KIDS instrument that teachers use to observe children here.
Readiness Overall and by Developmental Area

In the fall of 2018, teachers observed 123,881 of 129,563 eligible children enrolled in Kindergarten. Of that number, 115,920 students were considered fully assessed, meaning teachers entered data for them in all of the 14 required measures. The rest of the students were either considered unable to rate (362 students) or were only rated partially (7,976 students). For these reasons, those students are not included in the following information.

Among 115,920 kindergarten students rated on all 14 required measures in Fall 2018:

**OVERALL READINESS**

- Demonstrated readiness in all 3 developmental areas: 26%
- Demonstrated readiness in 2 developmental areas: 18%
- Demonstrated readiness in 1 developmental area: 39%
- Demonstrated readiness in 0 developmental areas: 17%

**READINESS BY DEVELOPMENTAL AREA**

- Demonstrated readiness in SED: 53%
- Demonstrated readiness in Math: 46%
- Demonstrated readiness in LLD: 33%

---

5 Number of students that were rostered for the Fall 2018 KIDS data collection.
6 Eligibility varies due to situations where teachers are unable to rate their students. The general rule is that a minimum of 30 days of observation is necessary to effectively and accurately rate student development.
7 To ensure an accurate reflection of children’s developmental abilities upon kindergarten entry, ISBE established “Student Exemption Reason Codes” that may be applied in situations in which teachers are unable to complete the KIDS assessment for a specific student.
8 SED and ATL measures are combined into one developmental area/score: SED.
9 KIDS allows children to demonstrate mastery through a variety of communication modes, language, and behaviors.
Readiness by Student Group

The following disaggregated information is included for schools and communities to raise awareness, generate conversation, and direct greater state and local investment in supports for students demonstrating greater needs. Identifying and understanding the needs of children as early as possible allows them the greatest chance to succeed in school. Providing additional supports to kindergartners already experiencing barriers to learning may afford them to the opportunity to make greater developmental gains.

In the 2018-2019 school year, students who required additional supports because they were English learners (EL), have individualized education programs (IEP), or received free or reduced-price lunch (FRPL)\textsuperscript{10} entered kindergarten at the following levels of readiness:

\begin{table}
\centering
\begin{tabular}{|c|c|c|c|c|c|c|c|c|c|}
\hline
\textbf{Student Group}\textsuperscript{1}\textsuperscript{11} & \textbf{STUDENTS WITH IEP} & & & \textbf{STUDENTS WITH FRPL}\textsuperscript{12} & & & & &
\hline
\textbf{STUDENTS WITH IEP} & & & & & & & & &
\hline
\textbf{STUDENTS WITHOUT IEP} & & & & & & & & &
\hline
\textbf{EL STUDENTS} & & & & & & & & &
\hline
\textbf{NON-EL STUDENTS} & & & & & & & & &
\hline
\textbf{STUDENTS WITH FRPL}\textsuperscript{12} & & & & & & & & &
\hline
\textbf{STUDENTS WITHOUT FRPL} & & & & & & & & &
\hline
\% K Ready in all 3 developmental areas & 12% & & & 18% & & & & &
\hline
\% K Ready in SED & 32% & & & 44% & & & & &
\hline
\% K Ready in LLD & 25% & & & 35% & & & & &
\hline
\% K Ready in Math & 20% & & & 23% & & & & &
\hline
\end{tabular}
\end{table}

\textsuperscript{1}During the 2018-2019 academic year, at least 49% of kindergarteners lived in households with limited resources (as defined by eligibility for free and reduced-price lunch). Children living in households that are economically disadvantaged are more likely to face housing and food insecurity, which places them at greater risk of academic failure. \textsuperscript{11}Shortage of additional supports and services, such as early intervention, qualified special education or bilingual educators, and access to quality early childhood experiences may impact readiness of student groups.

Readiness by Race/Ethnicity

The data show early gaps between the readiness of students of different races, reinforcing the need for equitable supports in school, and in access to quality experiences before kindergarten. It also confirms what is well established in the literature and codified in ISBE’s Equity Values and Belief Statement that structural racism impacts children at this early stage of development. The data provide one indicator of barriers faced in prior years and affirm the importance of supporting early learners with comprehensive, high-quality supports to combat years of systemic inequity in both funding and opportunity.

13 The denominator for the readiness percentages shown is based on the number of kindergarten students rated on a minimum of 14 required measures and who identified as a specific race or ethnicity at enrollment. These percentages are not based on the total population of students who were assessed on the 14 measures.

---

These data reaffirm the commitment ISBE has to supporting Illinois’ early learners with comprehensive, high-quality supports to combat years of systemic inequity in both funding and opportunity. This strategy is outlined in ISBE’s Equity Values and Beliefs Statement \(^iii\), which was approved by the Board in October of 2018.
KIDS in Action Across Illinois

KIDS is a relatively new tool, and teachers are working hard to implement it with fidelity. KIDS requires educators to collect data by observation – a practice familiar to preschool and other early childhood teachers but often new in kindergarten classrooms, depending on the teacher’s background. Teachers across the state are showing creativity and diligence in familiarizing themselves with the measures and developing observation collection systems that allow them to create developmental portfolios for each child. The second year of statewide implementation shows improved district participation rates.

The information gathered through KIDS is encouraging districts to focus on strengthening and developing early learning supports for classrooms, teachers, and families. Assisting in that is a team of Regional KIDS Coaches, all of whom are former kindergarten teachers, who are available to provide teacher, school, district, and regional level supports at no cost to each school district. Many districts have been working with their KIDS Coaches on more individualized goals based on their local KIDS data results.

- Some districts have created their own professional learning networks around KIDS.
- Others have used KIDS data to align more intentionally with feeder preschool classrooms or have used KIDS data to make the case in their communities to shift from half-day to full-day kindergarten.
- Some districts that made the decision to collect data for the full domains on each student and administer KIDS multiple times per year are using KIDS data as their student report cards.

For vignettes showcasing how educators and districts use KIDS to improve instruction, connect with preschools, engage families, and impact policy, go here.15

KIDS Resources

As with any new tool, especially an observational tool, there is a learning curve in the administration of KIDS statewide. The Division of Early Childhood at ISBE is actively working with administrators and teachers across the state to ensure districts have sufficient supports in order to implement KIDS with fidelity.

Every district in the state can access a KIDS Coach who is available to provide training and help with data collection and data interpretation. For a listing of available supports, go here.16

Additional resources are available for families, teachers, schools, and district leaders and can be found at isbe.net/kids.

“In a district that focuses heavily on attainment-based assessments, KIDS reminds me to look for and celebrate the strengths of my students. We have a long way to go with implementation and alignment, but this is a great first step.”

— Katie Cannaday, Kindergarten Teacher, Chicago Public Schools
