Guidance Focus: Reporting for Charter Schools Authorized by LEAs

2

Objective:

- Understand specific requirements associated with charter schools and implications on district reporting.

Site-Based Expenditure Reporting Overview

The ESSA Site-Based Expenditure Reporting Requirement

4

ESSA requires that SEAs report on their Report Card:

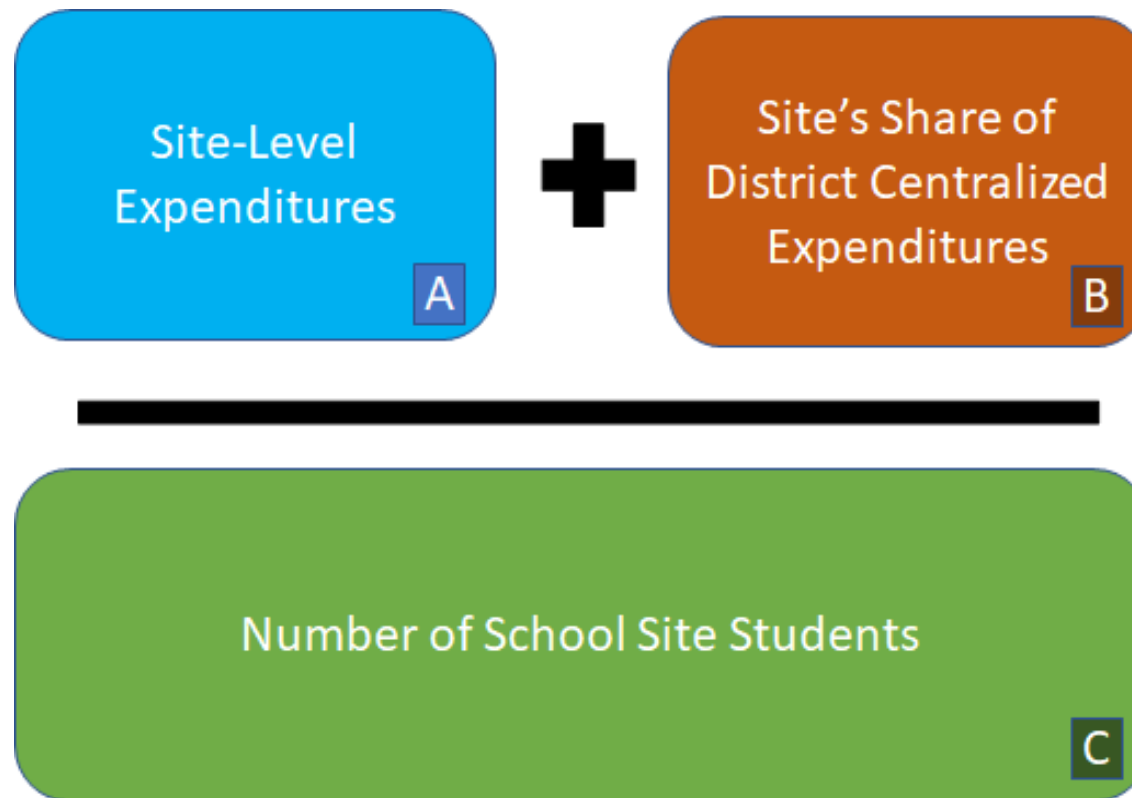

“The per-pupil expenditures of Federal, State, and local funds, including actual personnel expenditures and actual non-personnel expenditures of Federal, State, and local funds, disaggregated by source of funds, for each local educational agency and each school in the State for the preceding fiscal year.”

Formula: Calculating Total Per-Pupil Expenditures for Each School

5

Per-pupil expenditures reported for each school shall be composed of:

Importantly, per ESSA, Sections A and B must be disaggregated by source of funds – federal vs. state/local (with state and local combined).

LEA-Authorized Charter School Reporting Requirements

Reporting Charter Schools

8

Charter schools should be reported as a site within a district, just like every other school in a district.

Charter school operators that operate multiple sites must have each charter school site reported individually.

Note that we are referring today to charters authorized by the district LEA; state-authorized charters are their own entity for this reporting.

As shown in the reporting table above, charters are their own site(s) within district reporting. Charter schools must be reported as individual schools, not as a network.

Calculating Charter School Expenditures

10

Charters provide all site-level expenditures aligned with guidance document requirements.

Charters should not report any authorizer/administrative fees; these will be captured in the district's report of the charters' "centralized costs."

A multi-site charter network will have its own "centralized costs." Include them in the "site-level" costs of the district's report on the school.

Therefore, multi-site charter operators will have to allocate their own centralized costs to each of their sites.

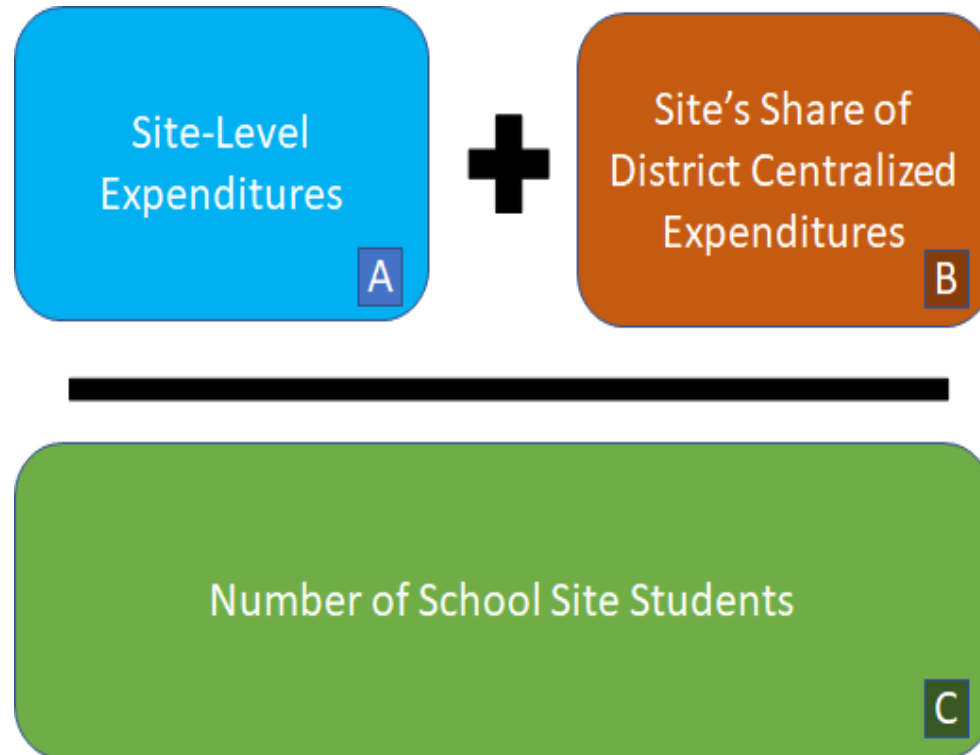

District costs incurred for overseeing and supporting charters should be reported in the charter schools' "centralized costs."

LEAs will most likely omit Tuition Payments to Charter Schools from this reporting (see the annual guidance document), as well as any pass-through funding (e.g., Title funds, Medicaid).

Calculating Charter School Expenditures

11

A Actual personnel and non-personnel expenditures assigned to the school, plus charter network costs (if applicable).

B Any LEA costs incurred from overseeing and supporting the charter school (e.g., administrative supports, in-kind services) that the LEA considers a centralized expenditure.

C Follows reporting guidance methodology.

Remember, A and B must be disaggregated by source of funding.

The charter(s) provide(s) Site-Level Per-Pupil Expenditures, including school expenditures and network costs allocated to the site. These data should ***exclude exclusions*** per the reporting guidance and be ***disaggregated by source of funds***.

District-Centralized Per-Pupil Expenditures are determined by the LEA. In many cases, they likely are ***LEA costs associated with oversight and support of the charter school***. These amounts are determined through the normal central cost allocation process. (For example, what schools benefit from which central costs?)

"Exclusions" follow reporting guidance and reflect most expenditures made by the LEA or the charter school that are not captured in the per-pupil calculations.

Note that **LEA Tuition Payments to Charter Schools** and **charter school authorizer fees** should NOT be reported in the per-pupil calculations OR in the exclusions category but rather OMITTED from the reporting entirely. (See the annual guidance document for more information about tuition payments.)

What are the implications for district reporting?

15

Charters provide all expenditures aligned with guidance document requirements.

Districts therefore omit tuition payments from their expenditures, and, in place of that, report charter expenditures. *This is significantly different from the district's Annual Financial Report.*

A charter management organization's network costs will be in the "site-level" costs. LEA costs incurred for overseeing and supporting charters should be reported in the charter schools' "centralized" costs, following the guidance document.

1. Centralized expenditures for charters may appear smaller since charter administrative costs are reported at the site level.
2. Charter networks will need to do their own allocation of network expenditures to their sites.
