

## **Per Pupil Allocation**

Once the participating public school attendance areas have been established for Title I services (see “Determining Educational Need and Participation” below for more information), an LEA then calculates the per-pupil allocation for each participating public school attendance area. Then, based on the total number of children from low-income families residing in each attendance area attending public and private schools, the LEA calculates the total amount of funds for each area. From this amount, the LEA reserves an amount of funds for the private school children (equal to the per pupil allocation multiplied by the number of low-income private school students in the area) to provide equitable services to eligible private school children.
