## ILLINOIS PUBLIC SCHOOL ENROLLMENT PROJECTIONS: 2004-05---2012-13

# ILLINOIS STATE BOARD OF EDUCATION DATA ANALYSIS AND PROGESS REPORTING

Feburary 2004

Jesse H. Ruiz Chairman Dr. Randy J. Dunn State Superintendent of Education (Interim)

### **FOREWORD**

This study presents public school enrollment projections through the school year 2012-2013. The primary purpose of this study is to facilitate statewide planning for school finance, facilities, and educational personnel. While the primary focus is statewide, the information should also prove valuable to individual school districts for comparative purposes. Data on enrollment projections by grade, county, and race/ethnicity are included.

This study was conducted by Dr. Shuwan Chiu, Principal Performance Consultant, Division of Data Analysis and Progress Reporting, Illinois State Board of Education, 217/782-3950.

#### INTRODUCTION

The sources of information used in this report were provided by the Illinois Department of Public Health's Center for Health Statistics and the Illinois State Board of Education's Public District/School Fall Enrollment and Housing Report data. The specific data used for actual and projected analysis in preparing this report are: the number of live births, the number of females by selected age ranges, and the number of students by grade.

#### **FINDINGS**

Illinois public elementary (K-8) school enrollment peaked in 1970-71 (1,684,132) while Illinois public secondary (9-12) school enrollment peaked in 1976-77. A decline in public elementary and secondary school enrollment continued through 1986-87 and 1990-91, respectively. However, since 1990-91, elementary and secondary enrollments, except for a slight decrease in secondary enrollment in 1997-98 and 1998-99, have begun to increase and the elementary enrollment has reached the peak of a trend in 2002-03.

Elementary enrollment reached the bottom of a trend in 1986-87 and has since increased 16.6% when compared with 2002-03. Secondary enrollment reached the bottom of a trend in 1990-91 and has since increased 18.1% when compared with 2003-04. Total public school enrollment began to increase in 1990-91 and is projected to continue increasing through the year 2007-08 to reach the peak.

The percent of white non-Hispanic students has declined since 1992-93 and is projected to continue to decline through the year 2012-13. The percent of black non-Hispanic students has, and is projected to continue to have, slight decreases, but will remain relatively stable through the year 2012-13. The percent of Hispanic students has increased since 1994-95 and is projected to continue to increase through the year 2012-13.

This report is prepared to assist those who are involved in facilitating statewide planning for school finances, facilities, and educational personnel. While the report is primarily for statewide analyses, personnel at the county and district level can use this report for comparative purposes.

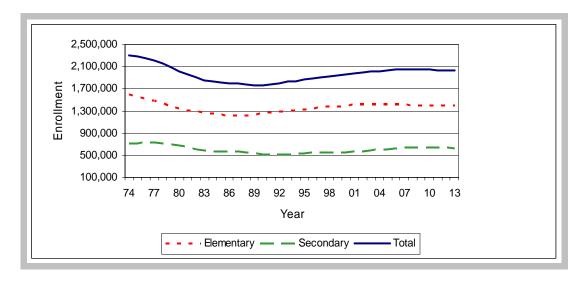

Illinois public school enrollment reached a peak in 1971-72 (2,373,659), but began to decline in each successive year, reaching a low in 1989-90 with a decline of over 615,000 students. The following information and data in Chart 1 illustrates specific aspects of the decline.

- Total enrollment declined each year thereafter, reaching a low of 1.76 million students in the 1989-90 school year.
- Elementary public school (K-8) enrollment declined each year thereafter, reaching an enrollment low of just over 1.22 million students during the 1986-87 school year. After academic year 1986-87, the elementary enrollment continued to grow and reached a peak in 2002-03.
- Secondary public school (9-12) enrollment peaked at just over 727,000 students in 1976-77. Secondary school enrollment declined each year thereafter, reaching a low of just over 506,000 students in the 1990-91 school year.

**Enrollment Projections** 

Illinois public total enrollment (K-12) is projected to increase through school year 2007-08. Illinois public school elementary (K-8) enrollment is projected to decrease each school year after 2002-03. Illinois public school secondary (9-12) enrollment is projected to increase each school year through 2008-09, reaching approximately 648,000 students. These data are presented in Chart 1 and Table 1.

Chart 1
Elementary, Secondary, and Total Enrollment and Projected Enrollment

## Enrollment Projections by Grade

The actual enrollment by grade for the school years 1999-00 through 2003-04, and the projected enrollment by grade through the school year 2012-13, are presented in Table 2.

For the fall of 1999 through the fall of 2003, the percent of students in the public school system who advanced a grade was determined by comparing the number of students in a given grade in a given year, to the number of students one grade lower in the prior year. For example, in the fall of 2002, the seventh grade enrollment was 160,819 but in the fall of 2001, the sixth grade enrollment was 163,524 students; therefore, 160,819 divided by 163,524 x 100 equals 98.35% as the percent of students in the public school system who advanced one grade. Any increase over 100% means an increase in enrollment for that grade when compared to the prior year enrollment for the next lowest grade.

For the fall of 2004 through the fall of 2012, the first grade enrollment projections are based upon the number of births six to ten years earlier; all other elementary grade enrollment projections are determined by the following method: to project the number of students by grade in the public school system for the fall of 2003 through the fall of 2011, the average rate of students (by grade) for the prior four years was multiplied times the enrollment for the next lowest grade of the prior year. For example, to project the number of eighth graders for the fall of 2004, add the rate for each of the prior four years, divide by four, and take that rate times the number of seventh-graders for the fall of 2003. Therefore 100.28% (fall of 2000) + 99.75% (fall of 2001) + 98.95% (fall of 2002) + 99.42% (fall of 2003) = 398.40% divided by 4 = 99.60%. The seventh-grade enrollment for the fall of 2003 was  $162,822 \times 99.60\% = 162,170$  students projected for eighth-grade for the fall of 2004.

As for the projection for the secondary enrollment (grade 9-12), to project the number of students by grade in the public school system for the fall of 2004 through the fall of 2011, the moving average on

the retaining rate cannot reflect the rapid rise of the secondary enrollment. Therefore, the moving average rate on the retaining growth is applied. For year 2004-05 through year 2007-08, the average of the growth rate of students (by grade) for the prior four years was added to the prior year retaining rate and then multiplied the enrollment for the next lowest grade of the prior year. After 2007-08, the same method to project the elementary enrollment is applied to project the secondary enrollment.

## **Enrollment Projections by County**

Enrollment projections, as a percentage change by county, are presented in Table 3. The projections are for school years 2007-08 and 2012-13 when compared to the 2003-04 school year.

For the 2007-08 school year, enrollment increases will range from 0.12% for Sangamon County to 43.55% for Kendall County when compared to 2003-04. For the 2012-13 school year, enrollment increases will range from 0.19% for Sangamon County to 126.88% for Kendall County when compared to 2003-04.

## Percentage of Enrollment Projections by Race/Ethnicity

Percentages of white and black students continue decreasing while percentages of Asian and Hispanic students continue increasing (see Table 4).
