

Inclusion of the Illinois Science Assessment (ISA) in the State Accountability System

For the IL TAC Webinar

April 2, 2019

Context

Background

- The State ESSA plan calls for inclusion of the Illinois Science Assessment (ISA) in the state accountability system starting in 2019-2020
- Presently ELA and Math are weighted 10% each. With the inclusion of science, the weights are expected to shift to 7.5% for each of ELA and Math and Science would contribute 5%

Today's Discussion

- Review approach for calculating academic performance
- Examine ISA results compared to ELA and Math
- Discuss timing and method for inclusion of ISA results in the state accountability system

How is Academic Performance Calculated?

- **Determine percent proficient**
 - Number of students scoring proficient or better / number of students who tested (or 95% of students who should have tested, if higher)
- **Convert to an indicator score**
 - If % Proficient > Interim Target, Indicator Score = 100
 - If % Proficient is not greater than Interim Target, indicator score = % Proficient/ Target (for group and year) * 100
- **Compute for all students groups with n > or = to 20**
- **Example**
 - Percent proficient = 35%
 - Target = 45%
 - Indicator Score = $35/45 * 100 = 78$

Questions for the TAC

- Does the TAC see any reason why the approach for computing academic performance for science should be distinguished from that used for ELA and Math?
- Does the TAC have any recommendations regarding the timing of including science test performance in the accountability model?
- What additional information would the TAC like to see to inform their decision?
